PROJECT

INSTAGRAM CLONE

- In this project, I took on various roles, including backend development with Java to manage user authentication and data storage in MySQL databases. Leveraging JDBC, I established connections between the backend and MySQL for seamless data retrieval and manipulation. On the frontend, I crafted simple yet functional user interfaces using HTML for structure and CSS for styling, with added interactivity using JavaScript. Through this project, I gained foundational experience in full-stack development, honing my skills in backend logic, database management, and frontend design, making it an excellent showcase of my early proficiency in web development.
